

LABCAT All Plastic Disposable Strynge

- Sterile 30mL and 50mL all-plastic disposable syringes are newly available.
- The barrel (outer cylinder) is made of polypropylene and the plunger (piston part) is polyethylene.
- There is no risk of tip/plunger separation because the plunger is an all-polyethylene one-piece plunger, instead of an inset plunger with a rubber tip inserted at the tip of the plunger.
- Since no rubber gasket on the plunger, it can be used without worrying about elution of rubber-derived substances.
- Needles is not included.
- Ideal for multi use in Laboratory.

✖ Please note that this product is not for medical use.

Luer Lock type

- Secure threaded cutouts that hold luer-hub type needles and adapters in place and will not come off during use.
- Threaded cutout is a side-mouth design.
- 50mL syringe has an extended volume scale.

P/N	Volume (expanded volume)	Specification	Quantity
LC4830S-LL	30mL	Barrel: Polypropylene Plunger: Polyethylene	40/pk
LC4850S-LL	50mL (60mL)		25/pk
